Energievraag
Initiële kosten
Exploitatiekosten
Beschikbare energiestromen
Etc.

WKO systeem

- ▶ Energie balans over periode (seizoen)
- ▶ Bij onbalans moet er warmte of koude worden geladen

Open WKO systeem

Doublet

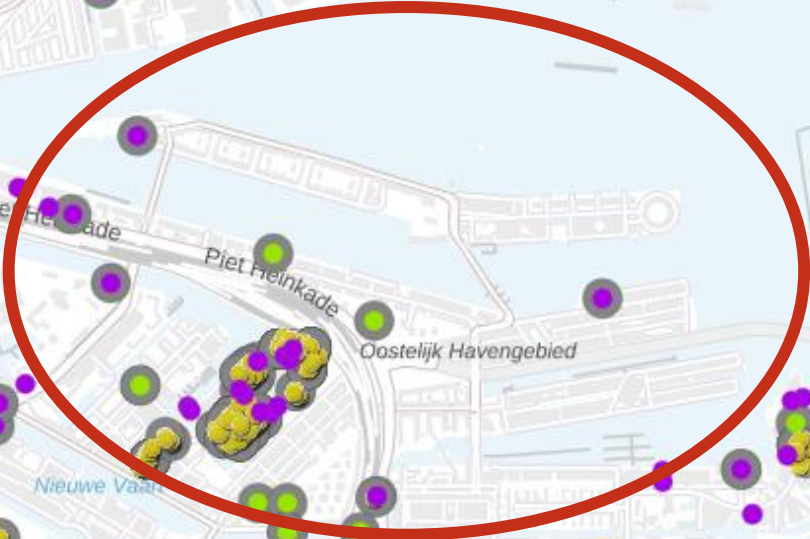

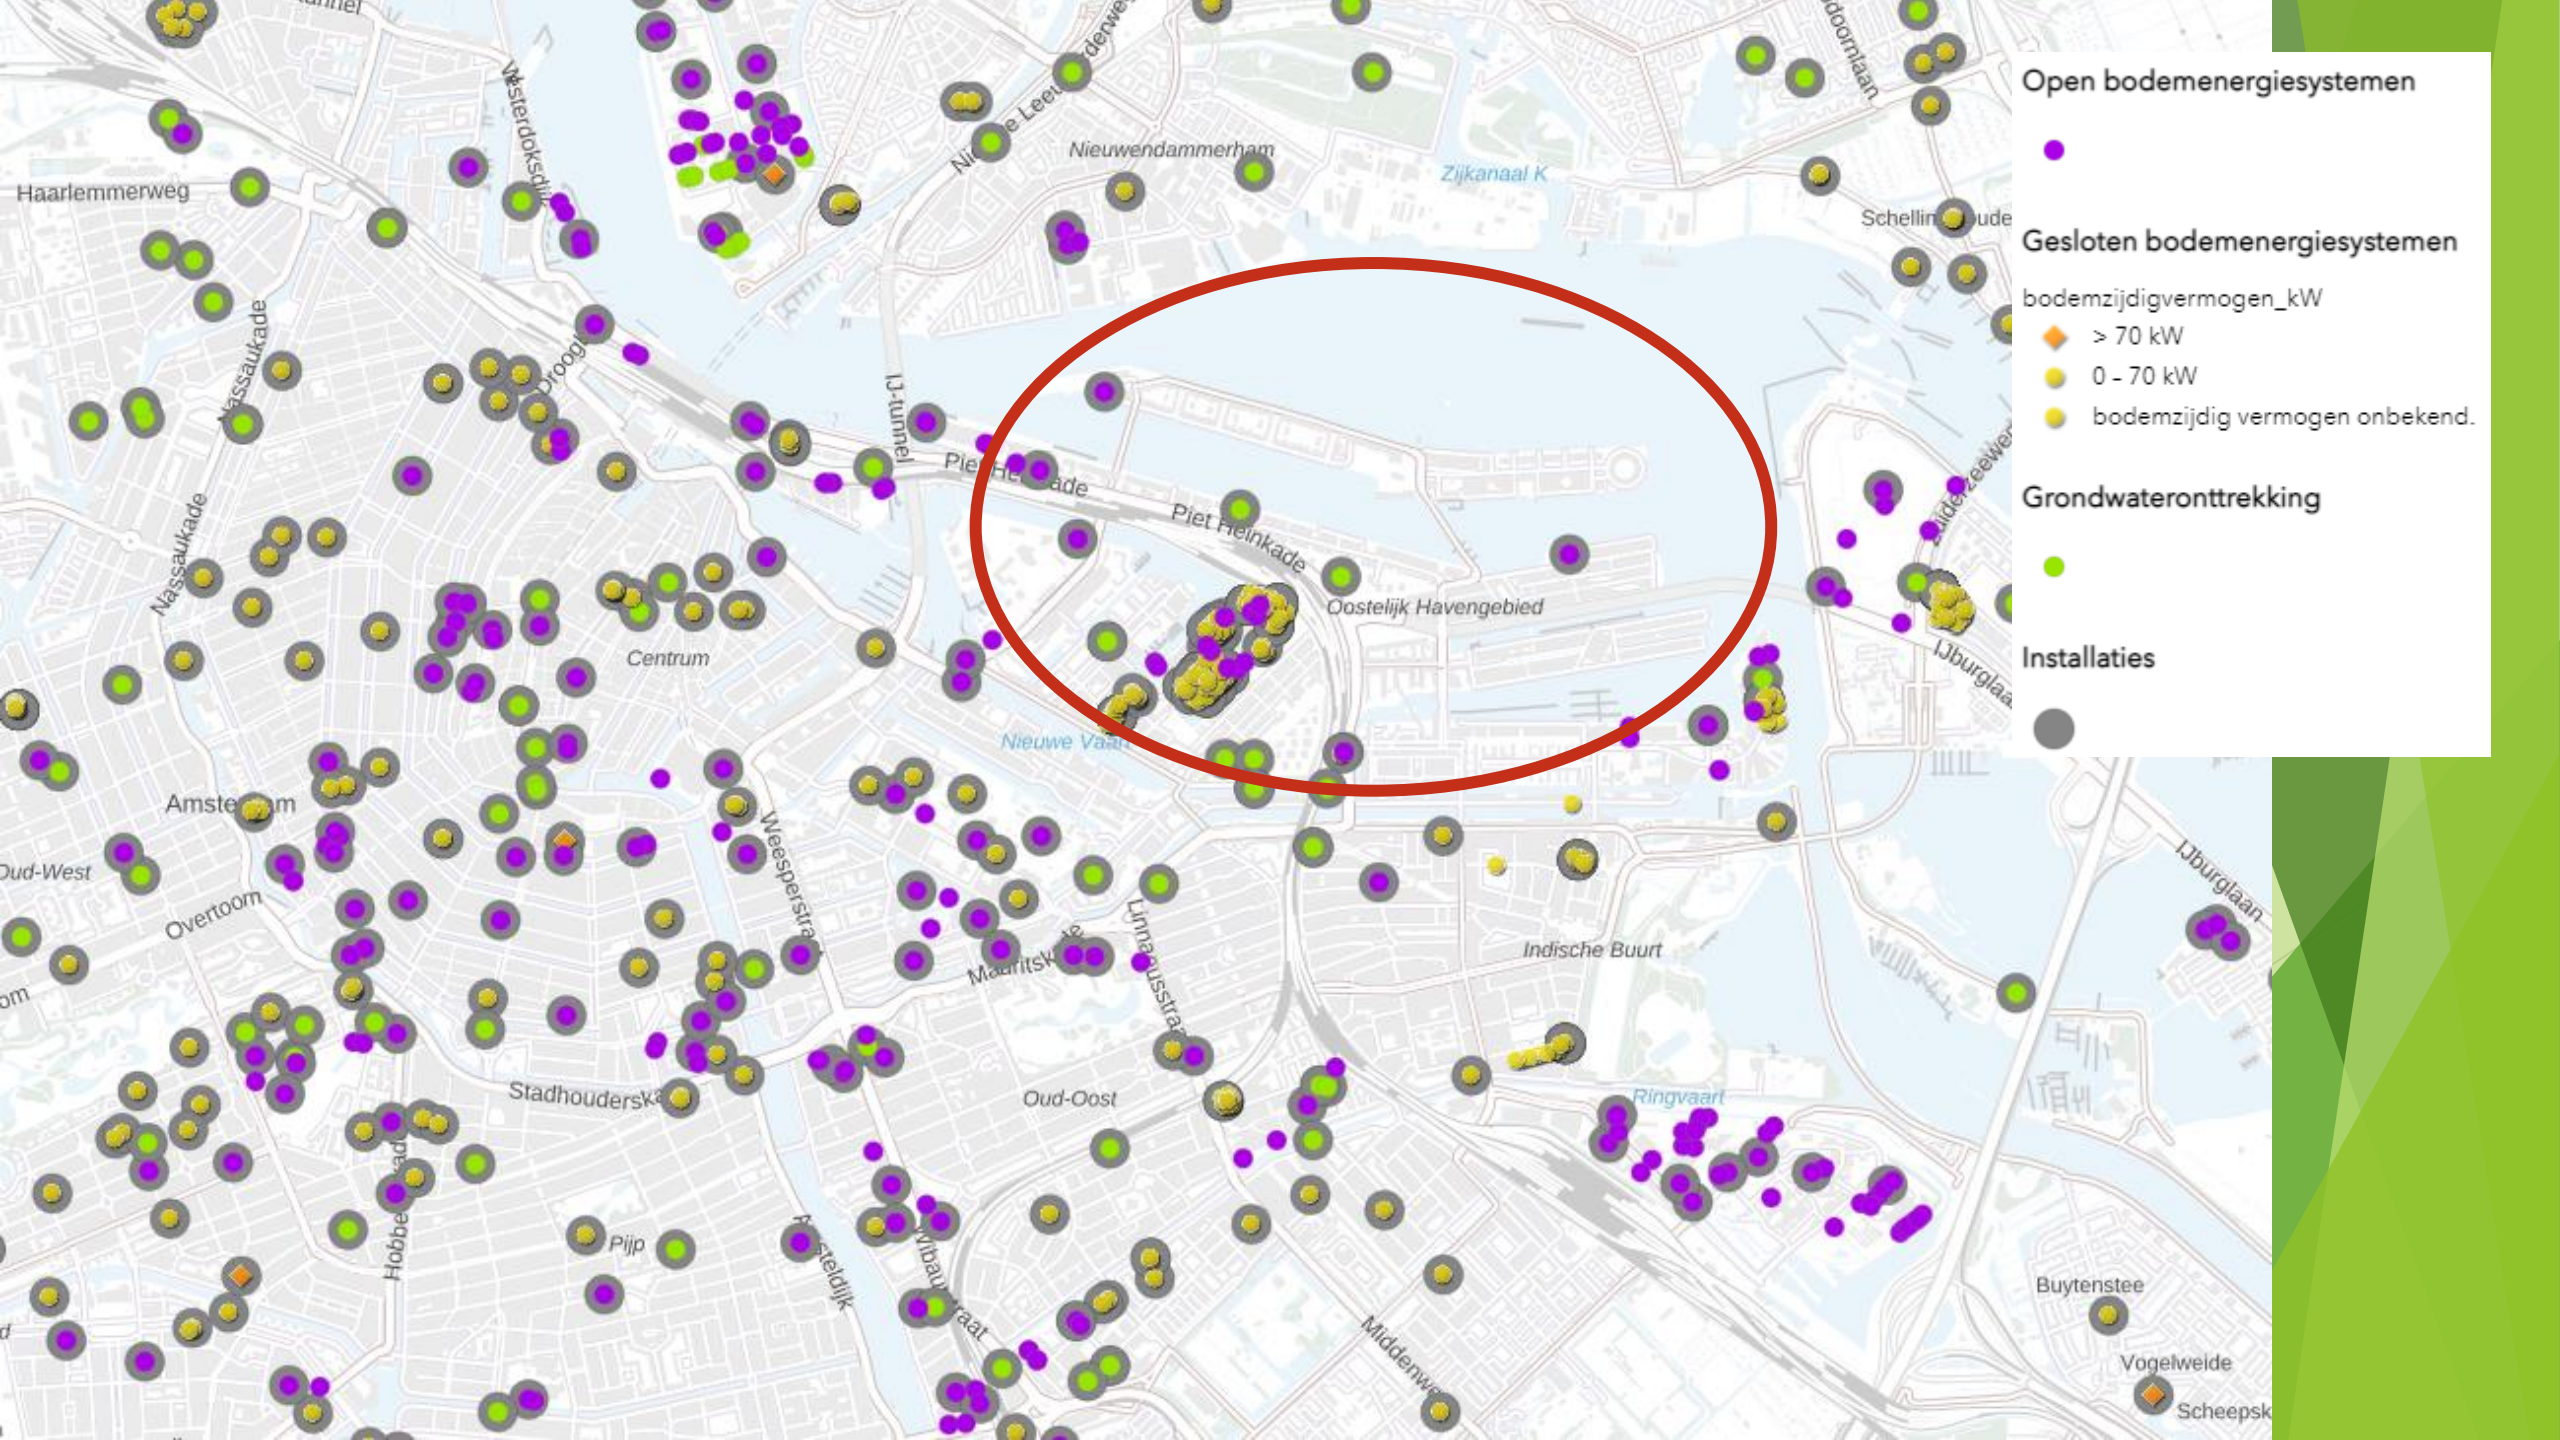

Monowell

Recirculation

Aquathermie

- ▶ TEO = Thermische Energie Oppervlaktewater
- ▶ TEA = Thermische Energie Afvalwater (riool)
- ▶ TED = Thermische Energie Drinkwater

Thermische Energie Oppervlaktewater

- ▶ Woningen: onvoldoende vermogen bij langdurig koud weer ($>5^{\circ}\text{C}$)
- ▶ Kantoren: zeer efficiënt in zomer, wel hele grote voorraad nodig ($<25^{\circ}\text{C}$)
- ▶ Effect op flora en fauna oppervlaktewater

WKO + TEO

- ▶ Mitigeren disbalans:
 - ▶ Warmte laden in de zomer of;
 - ▶ Koude laden in de winter
- ▶ Verhogen efficiëntie

$$Q = mc\Delta T$$

Einde

Vragen?

Principe

Geothermie

- ▶ Hoge temperaturen
- ▶ Hoge druk pompen
